

How to use the photovoltaic bracket straightening machine

How do I use a standard speed straightener?

The standard speed straightener is completely self contained and only needs to be plugged into a 20 amp, 120 VAC, 60 HZ outlet. If an extension cord is used as a source to the straightener power, it should be a minimum 12 gauge wire to keep the voltage losses down and also for electrical safety reasons. Please check your local safety codes.

What should I do if my straightener is damaged?

Visually inspect the complete machine for physical damage due to shipment and handling. If the straightener was damaged in shipment, contact the carrier first and then Rapid Air. Install the straightener on a level surface with sufficient clearance for loading the material and adjusting the roller pressure for straightening.

What is the power switch on a 230 volt straightener?

This illuminated switch is the main power switch for the controller. On the 120 VAC straighteners, it will be a toggle switch and on the 230 VAC version it will be a mushroom push-button. It must be "ON" for the straightener to function.

Should a straightener be set before bolting down?

CAUTION: Before bolting the straightener down, check for the longest feed length to be run. The straightener should be set so that there will be about two or three feed lengths in storage in the loop without re-inducing coil set in the material.

Do solar modules work with the Z-bracket mounting system?

Modules provided by other manufacturers may work with the Z-Bracket Mounting System provided the following conditions are met: Solar module weight does not exceed 88 lbs (40 kg) or total load per bracket does not exceed 22 lbs (10 kg). Solar module framing material is constructed of an aluminum

How does a photovoltaic module manufacturing line work?

The first phase in a photovoltaic module manufacturing line is joining the solar cells, which is done by a solar tabber and stringer, a totally automatic machine able to optimise the very delicate phase of stringing and tabbing.

Item YX41-41. Solar bracket roll forming machine for producing solar industry support using bracket. Solar bracket application. Solar bracket allows the components to be angled according to different regions, so that the local solar ...

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in the solar photovoltaic power generation system. The materials of solar supporting system products are carbon

How to use the photovoltaic bracket straightening machine

steel and stainless ...

The main procedures of the stringer include pulling / cutting PV ribbon, laying, positioning and rectification, soldering and detection, etc. MBB Cell Stringer: It is used to solder 9-16 circular interconnection ribbons with a diameter of about ...

Start-Up: Turn on the machine using the designated power switch. Make sure to follow the manufacturer's guidelines for starting and stopping the machine. ... This is often done using a ...

Item YX41*41. Ground solar system PV rack channel making machine for producing solar industry support using bracket. Solar bracket application. Ground solar panel brackets mountings system channel adopt Q235B steel bracket as ...

Solar photovoltaic bracket forming machine. Solar photovoltaic bracket forming machine has stable performance, fast discharging speed, mature manufacturing technology and strong ...

How to use the photovoltaic bracket straightening machine
