

# How to write a good example of a power grid Weibo article

What is a traditional energy grid?

In a traditional energy grid, power flows from a centralized source like a power plant to points of consumption. When more power is needed, a new plant has to be built. Traditional energy grids have worked well for decades, but climate change and energy stressors mean they need a re-think. Image: Intel

Why do we need a power grid?

Power grids are the foundation of energy systems, playing a key role in the energy transition by enabling the use of renewable energy sources (RES). To meet the growing demand for renewable energy, the world may need to integrate RES into power grids--but there are hurdles to overcome.

What is a power grid?

The power grid is an interconnected network of electrical systems that generate, transmit, and distribute electricity to consumers. This vast infrastructure spans entire countries, connecting power plants to substations and ultimately to individual homes and businesses.

How can grid operators use flexibility services?

Grid operators could use flexibility services to offer a more reliable, stable power supply to consumers by balancing supply and demand on the power grid in real time, reducing the need for higher-cost and higher-emitting peaking power plants.

Is the energy grid sustainable?

Today's energy grid structure is unsustainable. It offers limited flexibility or openness to support emerging renewable technologies. Traditional energy grids support a one-way flow of power from centralized sources, such as coal, nuclear and gas to points of consumption -- homes, businesses and data centers.

Should China implement a smart power grid by 2020?

The need for economic development and environmental protection require an aggressive renewable energy policy with a vision to have renewable energy account for 15% of national primary energy consumption by 2020. The State Grid Corporation of China (SGCC) established the plan to implement smart power grids in China by 2020.

The body of a news article should provide details, examples, and personal opinions that support the article's main point. Journalists should use English effectively, choosing strong verbs and avoiding passive voice. ...
