Which Visualization Library is used for rooftop photovoltaics?

The library for visualization is matplotlib. The project target is to segment in aerial images of Switzerland (Geneva) the area available for the installation of rooftop photovoltaics (PV) panels, namely the area we have on roofs after excluding chimneys, windows, existing PV installations and other so-called 'superstructures'.

How accurate is the spatial distribution of rooftop PV power generation potential?

By combining the above results and setting the solar radiation parameters and PV system efficiency, we can obtain the spatial distribution of the rooftop PV power generation potential in rural areas. This method is applied in northern China on a village and a town scale, and the overall accuracy of the revised U-Net model can reach over 92%.

Can rooftop PV panels be shielded at a micro-level?

After transforming the detected projected roof areas to equivalent roof sizes, two calculation methods for the potential installed rooftop PV panel area were proposed, namely OTI and PI, and the shielding issue of adjacent PV panels was considered at the micro-level.

How much power does a rooftop solar PV system generate?

Even though the quantity of solar radiation is relatively small, it still generates more total power. When we only considered the PI method, the maximum rooftop solar PV power generation of a single building in Village A was over 40,000 kWh, with an average of 16,900 kWh. Fig. 19.

What is potential PV panel area at micro level?

Potential PV panel area at micro level was calculated using 2 installation methods. The spatial distribution of solar PV power generation was obtained. Rooftop photovoltaic (PV) power generation is an important form of solar energy development, especially in rural areas where there is a large quantity of idle rural building roofs.

Can PV panels be installed parallel to a flat roof?

In OTI, using a flat roof as an example, we placed the PV panels on the rooftop according to the optimal angle of maximum power generation and considered the shading problem of two adjacent PV panel rows, as shown in Fig. 7. In PI, PV panels are installed parallel to the roof without PV panel spacing.
