

Inspection contents before photovoltaic panel installation

Do you need a solar panel inspection?

However, before your new solar system can start powering your home, it must pass a crucial step: the solar panel inspection. This process ensures that your installation meets all safety standards and local building codes. To help you navigate this important phase, we've compiled a comprehensive solar panel inspection checklist.

What is a solar panel inspection?

The solar inspection process is one of the most time-consuming parts of any company's operations, from design to installation. PV Education 101: A Guide for Solar Installation Professionals shows how to frame solar panel inspection when speaking to your customers about development costs and installation timelines.

What is solar permitting & inspection?

Solar permitting and inspection refer to two processes that need to happen before a solar array can receive permission to interconnect to the grid and start producing electricity. Generally, local governments require a homeowner's solar installer/contractor to obtain a permit for rooftop panels before they can be installed.

What is included in a solar inspection?

There's some published examples of what is included in a solar inspection such as SolarAPP+ and California's solar permitting guidebook. During an onsite solar inspection, systems are evaluated for installation quality, equipment compatibility and compliance to building codes, and ensuring the system was installed as it was permitted.

What is a solar panel inspection checklist?

This checklist covers the key items that inspectors typically evaluate. Use it to prepare for your inspection and increase your chances of passing on the first attempt. By systematically going through this checklist, you can ensure that your solar panel system meets the necessary requirements for inspection.

Who conducts a solar panel inspection?

Typically, solar panel inspections are conducted by:

- Local government officials: Usually from the building or electrical department.
- Utility company representatives: To ensure proper grid connection and metering.
- Third-party inspectors: Sometimes hired by local authorities or solar companies for additional expertise.

3. When Inspections Occur
