How do I install a solar stack module?

Insert the middle clamps and tighten them. Insert the end clamps laterally in the pedestal. The end clamps are attached and then tightened at the height of the module frame. Modules should be installed to the Solar Stack pedestals with the manufacturer approved middle/end clamps.

How do I connect a solar stack module to a pedestal?

Modules should be bonded to the Solar Stack pedestals with the manufacturer approved middle/end clamps. Grounding hardware (as a part of the module clamps) forms secure electrical bonds with both the module and the pedestal, resulting in many parallel grounding paths throughout the system.

What are the components of a solar stack pedestal system?

The system is a non-separately derived system. The following components have been evaluated for bonding as the fault current ground path: PV module, Mid Clamp, End Clamp, Pedestal and Ground Lugs. Solar Stack pedestals can be installed on BUR (Build Up Roong), Mineral surface (Modied Bitumen), EPDM, PVC, TPO, Hypalon and Concrete roofs.

How do you mount a solar panel on a roof?

MOUNTING THE SOLAR COLLECTORS TOP HEADER BRACKET 1. Locate hold down bracket on roofing above subroof or sheathing. (Do not attempt to attach clamps to roof material only!) 2. Mark and drill a pilot hole. 3. Inject the sealant into the pilot hole and on the bottom of the hold down bracket. 4.

Who should install a solar panel?

All electrical installation and procedures should be conducted by a licensed electrician or solar contractor. Routine maintenance of a module or panel shall not involve breaking or disturbing the bonding path of the system. All work must comply with national, state and local installation procedures, product and safety standards.
