

Insurance compensation for photovoltaic panels encountering typhoons

Why is insurance important for photovoltaic plant operations?

Insurance is important to several aspects of photovoltaic (PV) plant operations. Insurance is often a prerequisite for financing, operating permits, interconnection agreements, and leases or as part of a power purchase agreement for an on-site PV system. The history of insurance for PV systems is short compared to other types of assets.

How do PV plant operators manage risk and cost of insurance?

PV plant operators can optimize the management of risk and the cost of insurance through design, construction, and O&M measures that reduce risk and through careful selection of coverage and deductibles.

What is a photovoltaic insurance policy?

A major component of operation-and-maintenance costs for commercial or utility-scale photovoltaic (PV) systems is insuring against losses from physical damage or liability for losses caused to others (Speer, Mendelsohn, and Cory 2010).

Are PV power providers vulnerable to cyber threats?

Cyber risk is an emerging exposure for which new coverage is being designed. Although cyberattacks more often focus on traditional utility providers by attacking control and communications systems, potentially resulting in service disruption or ransomware attacks, utility-scale PV power providers also have exposures to such threats.

Why should you hire a claims handler for a PV system?

Claims handling can be critical in helping to reestablish full operations following a loss. Insurance companies that specialize in the PV industry often have expert claims handlers that can help minimize system downtime and ensure identification of less obvious losses.

Are commercial insurance premiums rising for solar properties?

Prices are rising across commercial insurance markets, but premiums for solar properties have gained faster, Mr Kolodner said. Insurers including CNA Hardy and Pioneer have ceased writing renewable energy business and begun to run off their accounts, according to a survey by Willis Towers Watson, a broker.

After seeing the initial images of the devastation in the wake of Typhoon “Odette” in the local news, grim memories of Typhoon “Yolanda” (international name: “Haiyan”), the Category 5 typhoon that also hit the ...
