

Introduction to new wind power projects

What are the advantages of wind energy projects?

A very short lead time for planning and construction is required as compared to conventional power projects. Wind energy projects are flexible with regard to an increasing energy demand- single turbines can easily be added to an existing park. Finally, wind energy projects can make use of local resources in terms of labour, capital and materials.

What is wind power?

Go to Top Wind power is the conversion of wind energy into electricity or mechanical energy using wind turbines. The power in the wind is extracted by allowing it to blow past moving blades that exert torque on a rotor. The amount of power transferred is dependent on the rotor size and the wind speed.

How do you get power from wind energy?

There are several ways to get power from wind energy. Wind turbines can be built on land, on lakes or in the ocean, in remote wilderness far from the power grid, within cities, or across vast plains. One wind turbine can power an individual home or farm, but several built close together form a wind energy plant, or wind farm.

How can wind energy projects make use of local resources?

Finally, wind energy projects can make use of local resources in terms of labour, capital and materials. The technological development of recent years, bringing more efficient and more reliable wind turbines, is making wind power more cost-effective.

What is a land-based wind power plant?

With multiple wind turbines working together, land-based wind energy plants can provide power to the U.S. electric grid to power homes, businesses, and more. The 63-megawatt Dry Lake Wind Power Project in Arizona was the first utility-scale wind power project in the United States.

What is a small wind turbine project?

The objective of this project is to provide tested small wind turbine systems, sized from 5 to 40 kW (maximum power), that meet a Cost/Performance Ratio of \$0.60/kWh or less at 5.4 m/s (12.1 mph) sites and significantly reduce the cost of energy by the year 2000.
