What are vanadium redox flow batteries (VRFB)?

Interest in the advancement of energy storage methods have risen as energy production trends toward renewable energy sources. Vanadium redox flow batteries (VRFB) are one of the emerging energy storage techniques being developed with the purpose of effectively storing renewable energy.

Does the vanadium flow battery leak?

It is worth noting that no leakages have been observed since commissioned. The system shows stable performance and very little capacity loss over the past 12 years, which proves the stability of the vanadium electrolyte and that the vanadium flow battery can have a very long cycle life.

How is energy stored in a vanadium electrolyte system?

The energy is stored in the vanadium electrolyte kept in the two separate external reservoirs. The system capacity (kWh) is determined by the volume of electrolyte in the storage tanks and the vanadium concentration in solution. During operation, electrolytes are pumped from the tanks to the cell stacks then back to the tanks.
