Should you install a battery energy storage system?

Installation of a Battery Energy Storage System (BESS) can help delay/defer expensive system upgrades in some cases. For example, instead of upgrading a neighborhood to higher voltage feeders or adding extra feeders, perhaps a BESS can supply power locally during those few hours each year when the existing feeders are approaching their limits.

How to connect a busbar to an energy storage system?

Connectors for connecting to the busbar simplify the installation of slide-in systems in energy storage systems. The connectors with reverse-polarity protection are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

What is a battery energy storage system?

a Battery Energy Storage System (BESS) connected to a grid-connected PV system. It provides the following system functions: BESS as backup, Offsetting peak loads, Zero export. The battery in the BESS is charged either from the PV system or the grid and

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently. Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video.
