

Is it good to install a set of solar panels to generate electricity

Why should you install solar panels at your home?

When you install solar panels at your home, you generate your own electricity, become less reliant on your electric utility, and reduce your monthly electricity bill. A solar panel system typically has a 25- to 35-year lifespan, meaning you can cut your electricity costs for decades by going solar.

Do solar panels generate more electricity?

While more hours of direct sun exposure will indeed help a solar system generate more electricity, modern panels are quite efficient and can still generate energy in low light situations. Someone living in Seattle, for example, may just need a somewhat larger solar system to get the same results as someone in Southern California.

Can I install more solar panels than I Need?

Yes, you can install more solar panels than you need to prepare for future electricity usage costs, like charging an electric vehicle or switching to electric appliances. Some utilities have limits on how much a system can be oversized.

Should you install solar panels before buying a home?

The age and condition of your roof also matter. If your roof needs repairs or replacement soon, it's best to address that before installing solar panels. Solar panels are an attractive feature to buyers and typically increase a home's value. That means you may be able to recoup some of your installation costs if you need to sell in the future.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Solar panels need sunlight to generate electricity. If you live somewhere with lots of sunshine, you can install fewer solar panels to cover your electricity bills. For example, one 400-watt solar panel in Arizona can produce almost 90 kWh of ...
