Are ground-mounted solar panels a good alternative to rooftop solar?

Ground-mounted solar panels are a great alternative for customers who want solar - but don't have a roof that's suitable for them. On top of being an alternative to rooftop solar, ground-mounted solar systems can be used on farms, in your garden, and more!

Where can a ground-mounted solar panel be installed?

Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space - a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems.

Are ground-mounted solar panels a good option?

Ground-mounted solar panels are an alternative that doesn't rely on your roof and can produce more energy, all while letting you take advantage of the federal tax credit, local tax incentives and solar power's long-term savings. Here's what you need to know. What is a ground-mounted solar panel?

Are ground-mounted solar panels better than a slanted roof?

The biggest advantage with ground-mounted solar panels is that they offer greater control over your solar panel direction and angle. Solar panels need to face either south or southwest to receive maximum direct sunlight. On flat ground, you can position solar panels in any direction you want to maximize sun exposure, unlike on a slanted roof.

Can you put solar panels on a roof?

You may also not like the aesthetics of solar panels on your roof, or perhaps your homeowner's association prohibits rooftop installations. If you have a big enough lot, you can set ground-mounted solar panels beyond the sight from your house or immediate yard.

Do rooftop solar panels produce electricity?

With rooftop solar panel systems, the characteristics of your roof directly impact the production of your system. If your roof isn't at the right angle, doesn't face south, or has obstructions like chimneys or skylights, your solar panels won't generate maximum electricity.

Fences need to be installed a safe distance in front of the panels to prevent shading issues on the panels. 5. Ground Mounts Are Easier to Access - Which is Both Good and Bad. Ground ...
