

Is solar power generation considered a perpetual motion machine

Is perpetual motion machine a viable alternative energy source?

Since fossil fuels is the most widely used energy source,thus it is depleting very fast. Alternative energy source is urgently needed to replace the use of conventional energy sources. Perpetual Motion Machine (PMM) which can be applied to produce electricity,may be an alternative solutionfor the problem the world is facing today.

What is a perpetual motion machine?

A perpetual motion machine is a device that can run indefinitely without the need for an external source of energy to power it. It is designed to reinvest in itself the energy it produces to keep moving. Once it starts,it runs forever while providing free energy. The perpetual motion machine is an inventor's dream.

Can a perpetual motion machine produce work without energy input?

A perpetual motion machine would have to produce work without energy input. The Second Law of Thermodynamics states that that an isolated system will move toward a state of disorder. Additionally,the more energy is transformed,the more of it is wasted.

Does a perpetual motion machine violate the law of Conservation of energy?

It thus violates the first law of thermodynamics: the law of conservation of energy. A perpetual motion machine of the second kind is a machine that spontaneously converts thermal energy into mechanical work. When the thermal energy is equivalent to the work done,this does not violate the law of conservation of energy.

What is a perpetual motion system?

A perpetual motion system of the primary kind creates work without the contribution of energy. ... Since fossil fuels is the most widely used energy... | Find, read and cite all the research you need on ResearchGate

Is the Moon a perpetual motion machine?

A playground swing is a different kind of pendulum," he notes,"but you can keep it going by pumping your legs. If you could pump forever,you would swing forever; but once you remove that energy,you soon stop. Perpetual motion requires an initial force and a sustaining force." As it turns out,the moon is very nearly a perpetual motion machine.

Under such conditions (far from real operating conditions), power generation would violate the second law of thermodynamics: one would have a perpetual motion machine of the second kind. For power generation, i.e. the generation ...

OverviewHistoryBasic principlesPatentsApparent perpetual motion machinesConspiracy theoriesSee alsoExternal linksPerpetual motion is the motion of bodies that continues forever in an unperturbed system. A perpetual motion machine is a hypothetical machine that can do work indefinitely without an external energy source. This kind of machine is impossible, since its existence would violate the first and/or second laws of thermodynamics.

Almost as soon as humans created machines, they attempted to make "perpetual motion machines" that work on their own and that work forever. However, the devices never have and likely never...
