Are solar panels affordable?

Additionally, falling equipment prices and government incentives have made solar increasingly affordable for homeowners. But solar panels aren't for everyone. "Solar is very bespoke," explained Aaron Nichols, a solar researcher for Exact Solar in Newtown, Pennsylvania.

Do solar panels increase resale value?

While your exact savings will depend on the cost of utilities in your area, your home might see an increased resale value if you install solar panels. Homes with solar panel systems sold for 4.1% more -- or an extra \$9,274 for the median-valued home -- compared to similar homes with no such upgrade, according to Zillow economic research.

Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Are solar panels a good investment?

Solar panels are an attractive feature to buyers and typically increase a home's value. That means you may be able to recoup some of your installation costs if you need to sell in the future. However, the extra home value may not be worth the initial investment--especially if you move soon after the installation.

Are solar panels viable in all states?

While some regions are known to get more sun than others, solar panels can be viable in every state. However, the direction your home faces and how much shade it gets are also factors. "Have a professional look at your home and see if there's potential," Nichols said.

Are solar panels a waste of money?

Too large a system may be a waste of money if you generate energy that you can't use, although installing a solar battery and/or exporting energy to the grid can help make the most of any excess. Solar panel system sizes are normally expressed in kilowatt peaks (kWp), which is the maximum output of the system.

A solar panel that was purchased, taken out of the box, and never installed on a rooftop is still considered used. A solar panel described as "like new" is a barely used product and performs ...
