

Ivy the magical tool for rooftop photovoltaic panels

Can Ivy-style solar collectors be used on building facades?

Using thin-film photovoltaics, Brooklyn-based Sustainably Minded Interactive Technology (SMIT) has developed ivy-style solar collectors for use on building facades. "Solar Ivy's unique patent-pending system continues to grow and to challenge our notions of what solar power can and can't do," the company says.

How does a solar ivy system work?

The system also allows for individual panels or "leaves" to be replaced in case of damage or further improvement in technology. Using the sun and the wind to provide renewable energy for the building, the Solar Ivy system also becomes a shade screen that minimizes solar heat gain.

Does Smit offer solar ivy?

Solar Ivy by SMIT has improved their line of building integrated photovoltaics and is now accepting orders for their commercially available systems.

How does Smit install a solar ivy system?

SMIT works with their customers to customize the installation and optimize the solar energy generated depending on the requirements and environmental conditions of the project. To set up a Solar Ivy system, first the building interface is attached and a steel wire mesh is installed.

How much does solar ivy cost?

Solar Ivy is available to customers in the form of two basic choices : either a completely recyclable, non-toxic organic photovoltaic panel which is priced at around \$18 per watt, or a CIGS panel, which costs about \$9 per watt and is the most efficient type of thin-film available in the market.

How does a roof-photovoltaic (PV) system work?

The article presents a comprehensive model that simplifies the roof-photovoltaic (PV) system unit by applying a coupled heat and mass transfer model to solar radiation. As illustrated in Fig. 1, the PV panel absorbs solar radiation and converts it into electrical energy.

Now, by average solar panel wattage per square foot, we can put a 10.35kW solar system on an 800 sq ft roof. This is how many solar panels you can put on this roof: If you only use 100-watt solar panels, you can put 103 100-watt solar ...
