

Suitable locations for wind and solar power generation are selected according to their respective conditions. It can be said that Japan is more suitable for solar power as it is ...

The R& D of solar thermal power generation turned out to be technologically successful, but not economically viable in Japan. Instead of such large-scale power plants, ...

Solutions are emerging to conquer solar power's shortcomings, namely, limited installation sites and low-capacity utilization rates. Japan is spearheading the development of two promising ...

This report is the follow-up to a report we published in 2019, "Solar Power Generation Costs in Japan: Current Status and Future Outlook" (the "2019 report"), and it analyzes the most recent ...

"We sincerely appreciate Hitachi Metals for having chosen us as a co-creation partner for such a large project," said Representative Director Shinji Akatsuka of TEPCO ...

According to the latest data released in a fiscal 2023 white paper on energy, Japan's cumulative installed solar-power capacity was 69.35 million kilowatts in fiscal 2021. The estimated capacity ...

The research team looked at solar facilities in Japan with a power generation capacity of at least 0.5 megawatts, and put together a package of digital data on them. The "Electrical Japan" database, which has basic ...

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic ...
