How does a photovoltaic power plant transition affect energy flux dynamics?

Assuming equal rates of incoming energy from the sun, a transition from (A) a vegetated ecosystem to (B) a photovoltaic (PV) power plant installation will significantly alter the energy flux dynamics of the area.

Where are photovoltaic modules installed?

At between photovoltaic modules, batteries and the grid power. The photovoltaic power generation module panel and other electrical equipment are directly installed on the roof or Building facade. Frame-less dual glass BIPV modules and the main gutter form a whole drainage system, with strong waterproof ability.

Why are large-scale photovoltaic installations becoming more popular?

Electricity production from large-scale photovoltaic (PV) installations has increased exponentially in recent decades 1,2,3. This proliferation in renewable energy portfolios and PV powerplants demonstrate an increase in the acceptance and cost-effectiveness of this technology 4,5.
