How does FEMP evaluate the performance of solar photovoltaic (PV) systems?

Previously, FEMP developed an approach to evaluate the performance of solar photovoltaic (PV) systems at federal sites. The methodology was used to evaluate the performance of 75 federal PV systems and compile statistics regarding KPIs of PV system performance.

Can inverter-tied storage systems integrate with distributed PV generation?

Identify inverter-tied storage systems that will integrate with distributed PV generation to allow intentional islanding (microgrids) and system optimization functions (ancillary services) to increase the economic competitiveness of distributed generation. 3.

Do energy storage subsystems integrate with distributed PV?

Energy storage subsystems need to be identified that can integrate with distributed PV to enable intentional islanding or other ancillary services. Intentional islanding is used for backup power in the event of a grid power outage, and may be applied to customer-sited UPS applications or to larger microgrid applications.

How many PV systems can be simulated?

Five PV systems with their local loads are shown, but any number of PV +load blocks can be simulated. A power factor correction capacitor was included as shown and was used to compensate the reactive power demands of the distribution transformers and lines. Typical parameters for distribution system components were taken from and .

How long does a PV inverter last?

Inverter hardware currently available has an MTBF of 5 to 10 years. Since the MTBF of the PV modules that those inverters are connected to is closer to 20 to 30 years, inverters will have to be replaced once or twice during the life of the system. Also, an inverter failure incurs a missed-opportunity cost for energy that was not generated.

Do distributed photovoltaic systems contribute to the power balance?

Tom Key, Electric Power Research Institute. Distributed photovoltaic (PV) systems currently make an insignificant contribution to the power balance on all but a few utility distribution systems.
