Can Lino 3 KNO₃ NaNO₃ eutectic mixtures be used for heat storage?

For heat storage applications, the solid-liquid phase changes of the LiNO₃-KNO₃ and LiNO₃-KNO₃-NaNO₃ mixtures of eutectic compositions have been investigated by Differential Scanning Calorimetry (DSC) and with a home built calorimeter working on large samples - typically 500 g.

What fluid is used to store energy in solar plants?

The fluid that is currently used to store energy in solar plants is a binary mixture of 60% NaNO₃ + 40% KNO₃ (solar salt), which has allowed for the construction of several commercial plants that can store up to 15 h of energy.

Is Lino 3 a high-temperature PCM?

Thermal-physical properties of a binary system on the basis of LiNO₃ and KCl have been investigated by Gasanliev et al. and the results suggest many desirable characteristics--including good thermal stability and high latent heat of melting--that make it an appropriate high-temperature PCM.

Which eutectic system is used for solar energy storage?

Binary and ternary eutectics on the basis of nitrates are frequently applied for energy storage purpose in temperature interval of 120-300 °C. For example, eutectic system KNO₃/NaNO₃, which exhibits negligible undercooling, chemical stability and no phase segregation, is the popular solar energy storage medium ,.

Are solid particles a new heat transfer fluid for concentrated solar thermal plants?
