

What is a microgrid based on a hybrid energy storage system?

A microgrid (MG) system based on a hybrid energy storage system (HESS) with the real-time price (RTP) demand response and distribution network is proposed to deal with uncertainties.

Can mg facilitate integration of distributed energy into the grid?

Using MG to facilitate integration of distributed energy into the grid is a solution for multi-energy complementary integration optimization (Valibeygi et al., 2021). The application of demand-side management means can make the load more adaptable to the uncertainty of the RES generation side.
