What is long-duration energy storage (LDEs)?

The Long-Duration Energy Storage (LDES) portfolio will validate new energy storage technologies and enhance the capabilities of customers and communities to integrate grid storage more effectively. DOE defines LDES as storage systems capable of delivering electricity for 10 or more hours in duration. [Learn more.](#)

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

What is OE's energy storage program?

Learn about the Energy Department's innovative research and development in different energy storage options. OE's Energy Storage Program performs research and development on a wide variety of storage technologies, including batteries (both conventional and...)

Should energy storage be cheaper?

Today's energy storage technologies are not sufficiently scaled or affordable to support the broad use of renewable energy on the electrical grid. Cheaper long-duration energy storage can increase grid reliability and resilience so that clean, reliable, affordable electricity is available whenever and wherever to everyone.

What is energy storage technology RD&D?

OE's development of innovative tools improves storage reliability and safety, analysis, and performance validation. Energy Storage Technology RD&D: Improving performance characteristics, characterizing novel materials, reducing costs, ensuring safety and reliability, and uncovering community benefits.

Should energy storage be co-optimized?

Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.

Energy storage is a technology that holds energy at one time so it can be used at another time. Building more energy storage allows renewable energy sources like wind and solar to power more of our electric grid. As the cost of solar and wind ...
