Can Li-ion batteries be used for energy storage?

The review highlighted the high capacity and high power characteristics of Li-ion batteries makes them highly relevant for use in large-scale energy storage systems to store intermittent renewable energy harvested from sources like solar and wind and for use in electric vehicles to replace polluting internal combustion engine vehicles.

Which lithium ion battery is best for stationary energy storage?

As of 2023, LiFePO<sub>4</sub> is the primary candidate for large-scale use of lithium-ion batteries for stationary energy storage (rather than electric vehicles) due to its low cost, excellent safety, and high cycle durability. For example, Sony Fortelion batteries have retained 74% of their capacity after 8000 cycles with 100% discharge.

Are lithium-ion batteries critical materials?

Given the reliance on batteries, the electrified transportation and stationary grid storage sectors are dependent on critical materials; today's lithium-ion batteries include several critical materials, including lithium, cobalt, nickel, and graphite.<sup>13</sup> Strategic vulnerabilities in these sources are being recognized.

Should lithium-based batteries be a domestic supply chain?

Establishing a domestic supply chain for lithium-based batteries requires a national commitment to both solving breakthrough scientific challenges for new materials and developing a manufacturing base that meets the demands of the growing electric vehicle (EV) and electrical grid storage markets.

Should lithium-ion batteries be commercialized?

In fact, compared to other emerging battery technologies, lithium-ion batteries have the great advantage of being commercialized already, allowing for at least a rough estimation of what might be possible at the cell level when reporting the performance of new cell components in lab-scale devices.

Are lithium-ion batteries the future of battery technology?

Conclusive summary and perspective Lithium-ion batteries are considered to remain the battery technology of choice for the near-to mid-term future and it is anticipated that significant to substantial further improvement is possible.
