

# Local solar power generation charges

How does PG&E pay for solar energy?

You're paid for your solar energy at close to the same rate as you pay for grid energy. When you use more energy than you generate during a month (called a "billing cycle"), your PG&E meter tracks how much you used from the grid. When you generate more energy than you use during a month, your meter tracks how much you sent to the grid.

What are the benefits of a local solar project?

Local solar projects help LADWP to meet renewable energy targets and reduce the carbon footprint created by fossil fuel-burning power plants. Solar also brings economic benefits for LA as a catalyst for creating jobs and stimulating the green economy. Local solar projects also support the reliability of LADWP's power grid.

Does Sonoma Clean Power pay for solar panels?

Sonoma Clean Power pays for the excess energy generated by solar panels at your home or business through its NetGreen program and Net Energy Metering (NEM). When your system generates more clean energy than is necessary to power your property, SCP pays you.

Does solar energy create local jobs and investment?

And every dollar spent locally on energy goes to create local jobs and investment. A Clean Coalition analysis found that installing 30 MW of local solar PV on built environments in urban and suburban communities will produce these benefits over 20 years:

Do you have to pay a minimum electricity bill with solar?

If you use \$10 per month or more of grid electricity, you won't be charged the minimum bill. Because the minimum bill cannot be offset with solar, most people choose to install enough solar to cover all but about \$10/month worth of electricity from the utility.

What are the benefits of solar power in Los Angeles?

Solar also brings economic benefits for LA as a catalyst for creating jobs and stimulating the green economy. Local solar projects also support the reliability of LADWP's power grid. They are considered "distributed generation" and function as mini power plants that generate energy right where it is used.

Standby rates are required if you self-generate some or all of your electrical power from your own generating facility. If your generating facility does not qualify for Net Energy Metering (or otherwise qualify for another exemption), you will ...
