How do I get a land lease for a solar farm?

You'll need to connect with a solar developer to secure a land lease for a solar farm. By following these four steps, you can put your land to use generating solar energy: If developers haven't tried to connect with you already, research which solar developers are offering solar farm leases in your area.

Does leasing land for solar farms pay off?

Landowners and communities throughout North America are seeing first-hand how leasing land for solar farms and other renewable energy projects pays off. Allocating a portion of your land to lease for an energy project opens up a diversified and dependable income stream.

How do I choose a solar panel farm?

First, take a look at your land. If it's a flat, open space that's 20 to 25 acres, your land is a good candidate for an average-sized solar panel farm. You should also know that once a solar developer installs the solar panels, they'll have very little impact on the physical state of your land.

Can a developer buy a solar farm?

Businesses and residents can purchase the solar energy generated by the developer's solar farm. The cheaper costs of solar energy can help offset utility bills. Everyone wins with renewable energy! You'll need to connect with a solar developer to secure a land lease for a solar farm.

Can a solar farm be built on a land parcel?

If the land parcel isn't spacious enough to accommodate a solar farm, the project may not proceed. As a rule, solar developers typically need at least 10 acres of viable land, or 200 acres for a utility-scale project.

How much land does a solar farm need?

The specific requirements may vary, but there are common factors that contribute to a successful solar farm. On average, a solar farm requires approximately 5 to 10 acres of land per megawatt (MW) of installed capacity. This means a 1 MW solar farm would need between 5 to 10 acres, a 5 MW solar farm would need between 25 to 50 acres, and so on.
