What should be included in a feasibility assessment for microgrid projects?

A feasibility assessment for microgrid projects should include all aspects of historical energy use/cost analysis, individual project identification, physical site/facilities due diligence, and projected financial and environmental benefits for projects meeting energy cost savings goals and resiliency objectives for critical loads.

Should protection design capabilities be integrated with microgrid feasibility analysis tools?

Integrating the protection design capabilities within microgrid feasibility analysis tools can enable protection costs and constraints to be internalized within the design optimization stage, potentially saving a great deal of effort for complex inverter-dominated designs. Black Start Generation.

Is microgrid integration feasible?

GE has studied microgrid integration feasibility through a variety of U.S. projects that are complete, as well as through many more in the works.

What are the enabling activities and developments in microgrids?

These enabling activities and developments are outlined here. Advanced smart grid devices. Over the next 5-10 years, it is expected that vendors will continue to introduce smart devices, such as software-defined switches and controllers, which will be used to improve the utility of microgrids.

How reliable are microgrid performance indicators?

For a comprehensive investigation of the microgrid performance indicators and optimal design, reliability analysis is performed. To do so, different values for the maximum annual capacity shortage denoted as CSF are considered from 0 % to 10 % with a step of 2 % while optimizing the components' sizes.

What are the goals of a microgrid project?

Goal 3: Decrease microgrid capital costs by 15% by 2031, while reducing project development, construction, and commissioning times by 20%. These goals additionally have cross-cutting topics of focus on equity and security in both R&D and partnered demonstrations.

To the knowledge of the authors, no study on the implementation of a renewable microgrid system in Switzerland has been published. In this work, a feasibility study for several sites in ...
