

Can microgrids improve energy resilience?

Since microgrids are not the only way to enhance energy resilience, communities may want to consider alternate resilience investment options, including hardening existing transmission and distribution systems, weatherizing power generation sources, and building additional distribution systems to provide energy supply redundancy.

How will the microgrids benefit the community?

Revenue generated by the microgrids will be reinvested into the community in several ways, including operation, maintenance, and future expansion of the microgrids, and as an emergency fund to bring solar energy to other low-income communities in the area.

Are microgrids a potential for a modernized electric infrastructure?

1. Introduction Electricity distribution networks globally are undergoing a transformation, driven by the emergence of new distributed energy resources (DERs), including microgrids (MGs). The MG is a promising potential for a modernized electric infrastructure ..

How can remote communities benefit from Microgrid technology?

"Remote communities are well-positioned to demonstrate optimized microgrid technologies, including those that generate renewable energy locally. With the right design and innovation, microgrid solutions will help lower energy costs, improve energy resilience, and spur economic opportunities."

Why are Community Microgrids on the rise?

Community microgrid models are also on the rise as cities seek distributed generation to provide more resilient and clean power. Policy initiatives and programs promoting resilient and distributed grid strategies, such as NY Prize, are the key to unlocking future growth in the community microgrid space.

Why are end-users still pursuing microgrids?

End-users are still pursuing microgrids for the same reasons: reliability and resiliency, incorporating renewable energy, and research and development. However, in recent years, microgrids have become known as a reliable and resilient power source that can maintain operation during storm events and grid outages.
