

Microgrid energy storage power generation system manufacturers

What is a microgrid control?

The new microgrid controls accommodate distributed energy power system designs and have the ability to control renewable energy resources (solar and wind) and energy storage - providing a single interface control for a completely integrated microgrid power system.

What is energy storage in a hybrid microgrid?

Energy storage systems are a key component in a hybrid microgrid and guarantee short-term backup power. Caterpillar can provide on-site energy storage systems to help stabilize transient loads, supply and absorb alternating current (AC) power, increase renewable energy source utilization, and transfer energy from time-of-generation to time-of-use.

What are the components of a microgrid?

Our solutions fully integrate all components of a microgrid, including diesel and natural gas generator sets, hydrogen technologies, renewable energy sources, battery storage systems, system level controls, transfer switches, and remote monitoring capabilities.

What is a microgrid generator?

What is a microgrid? Our range of diesel and natural gas generators are suited for all microgrid power generation requirements, ranging from 15 - 3,750 kVA. Advanced Microgrid Controls support multiple configurations and design implementation solutions to adapt to your evolving microgrid requirements.

What is a smart microgrid?

Smart, flexible Power Management solutions that optimize energy production in a microgrid. We are working with customers and communities across the globe to install smart microgrids which integrate existing power generation assets with renewable sources to meet local energy demand.

What are hybrid energy solutions & microgrids?

Microgrids can operate independently or in conjunction with the electrical grid/utility. Hybrid energy solutions (HES) are microgrids that involve a combination of power sources. They can combine proven cost-effective renewable energy from wind or solar sources with conventional diesel- or gas-fuelled generation.
