

How can ranfis control the frequency of a microgrid?

Our proposed control strategy is based on the Recurrent Adaptive Neuro-Fuzzy Inference System (RANFIS). This controller can dynamically adjust the active power output, thereby assisting in frequency control within the microgrid.

How do we control the frequency of Islanded microgrids?

In the context of controlling the frequency of islanded microgrids, a common approach involves employing droop control based on active-frequency power droop characteristics.

What is the frequency control strategy for a hybrid stand-alone microgrid?

In this paper, the frequency control strategy is designed for a hybrid stand-alone microgrid, which is robust against load disturbances, variations in weather conditions, and uncertainties in the microgrid parameters. The proposed intelligent control scheme relies on the Recurrent Adaptive Neuro Fuzzy Inference System (RANFIS).

Can solar PV generation contribute to microgrid frequency control scheme?

Solar PV generation can also benefit the power system frequency regulation via fast active power control. Therefore, it can contribute to the microgrid frequency control scheme by considering a fraction of PV generation as headroom.

How to control the frequency of a microgrid with distributed generation sources?

In this section, the frequency model of a microgrid with various distributed generation sources is first implemented to control the microgrid frequency. The proposed RANFIS controller is designed to reduce fluctuations in the microgrid frequency compared to other controllers.

What is a frequency regulation model for Microgrid with Share energy storage?

A frequency regulation model for microgrid with share energy storage is established. A DRL-based economic frequency regulation method is proposed. Performance and operating cost of frequency regulation are considered together. Multiple frequency regulation methods are compared and analyzed.

Hydrogen energy storage (HES) systems have recently received attention due to their potential to support real-time power balancing in a power grid. This paper proposes a data-driven model predictive control (MPC)

...

To enhance better frequency regulation in the microgrid, proportional integral (PI) controllers are used for controlling the real power generation of these micro sources. It is ...
