

New Energy Storage Power Supply Pin

How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

What is TE Connectivity's battery energy storage system (BESS) solution?

TE Connectivity's (TE) Battery energy storage system (BESS) solutions, which improves power allocation flexibility in power generation, power transmission, and power consumption, help meet this increased demand for alternative energy sources.

How to connect a busbar to an energy storage system?

Connectors for connecting to the busbar simplify the installation of slide-in systems in energy storage systems. The connectors with reverse-polarity protection are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

Why do we need energy storage systems?

Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated. They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid.

Why do we need a special connection technology for storage systems?

They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid. Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.
