

New policy for solar photovoltaic power generation

Is solar photovoltaics ready for the future?

Solar photovoltaics (PV) is a mature technology ready to contribute to this challenge. Throughout the last decade, a higher capacity of solar PV was installed globally than any other power-generation technology and cumulative capacity at the end of 2019 accounted for more than 600 GW.

Will solar PV be the future of electricity?

In the REmap analysis 100% electricity access is foreseen by 2030, in line with the Sustainable Development Goals, and solar PV would be the major contributor to this achievement. Costs are expected to reduce further, outpacing fossil fuels by 2020 (IRENA, 2019f).

How does policy support affect solar PV deployment?

Policy support remains a principal driver of solar PV deployment in the majority of the world. Various types of policy are behind the capacity growth, including auctions, feed-in tariffs, net-metering and contracts for difference.

What is the IEA photovoltaic power systems technology collaboration programme?

The IEA Photovoltaic Power Systems Technology Collaboration Programme, which advocates for solar PV energy as a cornerstone of the transition to sustainable energy systems. It conducts various collaborative projects relevant to solar PV technologies and systems to reduce costs, analyse barriers and raise awareness of PV electricity's potential.

What percentage of electricity demand is covered by solar PV?

In 2019, solar PV supplied 9% of electricity demand in Germany and 19% in California (Figure 5). Existing plans contemplate penetration higher than 20% in several power systems by 2030. Figure 5. Percentage of electricity demand covered by solar PV in different markets worldwide

Are solar PV installations eligible for government rebates?

Once accredited with the Clean Energy Council, solar PV installations are eligible for government rebates such as Small-scale Technology Certificates and feed-in tariffs.

In 2023, an estimated 96% of newly installed, utility-scale solar PV and onshore wind capacity had lower generation costs than new coal and natural gas plants. In addition, three-quarters of new wind and solar PV plants offered cheaper ...

In addition, Table 1 shows that "power grid" is the most frequent term, indicating that PV power generation policies are closely related to the grid. It is the key element in policy ...

New policy for solar photovoltaic power generation

Global energy demand and environmental concerns are the driving force for use of alternative, sustainable, and clean energy sources. Solar energy is the inexhaustible and ...

In this context, the European Union (EU) and China play a key role, being two important PV value chain players committed to reaching carbon neutrality by 2050 [] and 2060 ...
