

Old Buick GL8 gearbox energy storage device location

What happened to the Buick GL8?

Once again Buick decided to let the previous GL8 live on by giving it a new nose and wheels! Engine choice is now limited to a 2.5 liter 4 cylinder with both the 3.0 liter V6 and 2.4 liter 4 cylinder no longer being offered. The wings coming off the Buick badge on the front make it look severely crosseyed.

Where did the Buick GL8 come from?

Although production may have begun in China in 1999, the Buick GL8 can trace its lineage back to the 1980's with the development and launch of the original GM U-Body minivans, including the Oldsmobile Silhouette and Chevrolet Lumina APV, the latter of which was exported to China in the 1990's before production of the GL8 started.

Is Buick GL8 sold in China?

It is only sold in China. Introduced in 1999, the first generation Buick GL8 is similar to the GM-made minivans that are sold in North America which was marketed under many nameplates. Like the North American GM minivans, it is built on GM's U-body platform, which is also used by the Buick Rendezvous and the Pontiac Aztek crossover SUVs.

Who makes the Buick GL8 minivan?

The Buick GL8 is a minivan that is produced by SAIC-GM, a joint-venture between Chinese automaker SAIC Motor and American automaker General Motors. It is only sold in China. Introduced in 1999, the first generation Buick GL8 is similar to the GM-made minivans that are sold in North America which was marketed under many nameplates.

When did the third generation Buick GL8 come out?

The third generation Buick GL8 debuted in China in October 2016, dubbed the GL8 ES and was sold alongside the second generation model. The Buick GL8 ES received a complete exterior overhaul using the newly introduced winged Buick grille treatment, as well as a redesigned roofline.

What is a Buick GL8 XEA1?

In 2001, the Buick GL8 XEA1 or Phoenix was developed as a collaboration between General Motors and Shanghai Automotive Industry Corporation (SAIC). The Buick GL8 XAE1 is a hybrid vehicle that uses a 35 kW fuel cell and compressed hydrogen gas to deliver its power.
