How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

Does proficad support photovoltaic circuit diagrams?

ProfiCAD supports the drawing of photovoltaic circuit diagrams. In addition to the common electrical engineering symbols, the library includes symbols such as solar cells, photovoltaic panels, solar collectors, inverters, etc. Should you need more symbols, you can create them in the symbol editor. Some sample drawings (click for full size):

Do grid-connected PV inverters need a backup?

Grid-connected PV inverters need to synchronize their output with the utility and be able to disconnect the solar system if the grid goes down. (1) A system that is designed to supplement grid power and not replace it at any time does not need backup, so installation is simplified.

How does a grid tied PV inverter work?

A typical PV grid tied inverter uses a boost stage to boost the voltage from the PV panel such that the inverter can feed current into the grid. The DC bus of the inverter needs to be higher than the maximum grid voltage. Figure 20 illustrates a typical grid tied PV inverter using the macros present on the solar explorer kit. Figure 20.

What happens if a PV module is backed up?

If there is more energy from the PV modules than is needed by the backed-up loads, the excess is put onto the grid through an internal transfer switch, resulting in a credit for the homeowner (net metering). When the grid is down or out of specification, the transfer switch opens, and only the backed-up loads receive power from the inverter.

How are panel current and voltage filtered?

The panel current and voltage are filtered using the MATH\_EMAVG block; this is done to remove any noise on the panel current and voltage sensing that may confuse the MPPT algorithm. Notice the color coding for the software blocks. The blocks in 'dark blue' represent the hardware modules on the C2000 controller.
