How much does solar installation cost?

According to the NREL data above, installation typically accounts for 5.5% of the total cost of a residential solar project, so this equation will get you a ballpark figure for labor costs. For example, if you receive a solar quote for \$25,000, you can expect labor to make up around \$1,375 of the all-in cost.

How does a ground-mounted PV system reduce Bos cost?

However, installation of ground-mounted PV systems at utility scale helps reduce the BOS cost of these systems because of economies of scale. Note that, for all cost values given in dollars per square meter (\$/m²) terms, the denominator refers to square meters of total module surface area.

How does colocating a PV & storage system save money?

Colocating the PV and storage subsystems produces cost savings by reducing costs related to site preparation, permitting, interconnection, installation labor, hardware (via sharing of hardware such as switchgears, transformers, and controls), overhead, and profit.

Do small-scale installers in the residential sector have a larger PV system?

We infer the predominance of small-scale installers in the residential sector using data on residential system financing (Wood Mackenzie 2022b). The higher efficiency of modules assumed for Q1 2022 (CA NEM 2022) results in larger residential PV system sizes compared with systems in Q1 2021.

Why is a ground-mounted PV system bigger than a rooftop system?

The ground-mounted system is larger because U.S. ground-mounted systems are larger than rooftop systems on average. Both the rooftop and the ground-mounted PV systems are modeled with three-phase string inverters with an ILR of 1.23. Both use 20.3%-efficient monocrystalline silicon modules from a Tier 1 supplier (CA NEM 2022).

What are the cost parameters for a commercial Li-ion energy storage system?

Commercial Li-ion Energy Storage System: Modeled Cost Parameters in Intrinsic Units Min. state of charge (SOC) and max. SOC. Note that, for all values given in per square meter (m²) terms, the denominator refers to square meters of battery pack footprint. The representative system has 80 kWh/m².
