

Can a grid-connected solar photovoltaic system participate in primary frequency regulation?

Conclusion This paper proposes a fuzzy-based control strategy for the grid-connected solar photovoltaic system to participate in primary frequency regulation without any energy storage support. A combined fuzzy based de-load control and control mode selector was proposed to enable PV operation at a scheduled level of power reserve.

Can a battery energy storage system support primary frequency regulation?

Author to whom correspondence should be addressed. This paper proposes a strategy for sizing a battery energy storage system ( BESS) that supports primary frequency regulation ( PFR) service of solar photo-voltaic plants. The strategy is composed of an optimization model and a performance assessment algorithm.

Are photovoltaics involved in primary frequency regulation?

Since the frequency of the power system always keep changing,the participation of photovoltaics in primary frequency regulation is time-sensitive. Although many countries have set standards on the response time of photovoltaic frequency regulation,the requirements of these standards are very loose.

Does data communication delay affect primary frequency regulation of photovoltaic power plants?

With the large-scale development of photovoltaic power generation,photovoltaic power plants (PVPP) are required to participate in primary frequency regulation to maintain the stability of the power system. Existing researches seldom consider the influenceof the data communication delay of PVPP on the primary frequency regulation ability of PVPP.

How to improve the frequency regulation ability of PVPP?

The optimization of PVPP communication system and the control strategywill help to improve the frequency regulation ability of PVPP. The grid-forming control strategy of inverters can makes PVPP show greater tolerance of communication delay during primary frequency regulation.

How can inverters improve the frequency regulation ability of PVPP?

The longer the delays,the weaker the PVPP's ability to participate in primary frequency regulation. In addition,the optimization of PVPP communication system and control strategyof inverters can help improve the frequency regulation ability of the PVPP,thereby maintaining the frequency stability of the power system.

1. Introduction

In modern power grids, energy storage systems, renewable energy generation, and demand-side management are recognized as potential solutions for frequency regulation services [1, 3-7]. ...

# Photovoltaic energy storage primary frequency regulation

To solve this problem, this paper proposes to add energy storage system on the DC side to satisfy the frequency regulation requirements. By adopting the virtual synchronous generator control ...

Introduction. In recent years, with the low-carbon transformation of energy structure, the access of a high proportion of new energy and power electronic equipment has become a significant feature of modern power system (Jain et ...

Battery energy storage systems (BESSs), as fast-acting energy storage systems, with the capability to act as a controllable source and sink of electricity are one of the prominent solutions for system services. This study ...

Introduction. In recent years, with the low-carbon transformation of energy structure, the access of a high proportion of new energy and power electronic equipment has become a significant ...

In the first method, an energy storage device is configured with a PVPP unit and the stored energy is used to participate in grid frequency regulation [9-13]. In addition, the ...

In this paper, an adaptive control strategy for primary frequency regulation of the energy storage system (ESS) was proposed. The control strategy combined virtual droop control, virtual inertial control, and virtual ...

A BESS sizing strategy for primary frequency regulation support of solar photovoltaic plants. *Energies* 2019, 12, 317. [Google Scholar] Ram&#237;rez, M.; Castellanos, R.; ...
