

Are cable-supported PV modules prone to vibrations under wind excitation?

However, because the cable-supported PV modules also possess high flexibility and low damping, they are prone to large vibrations under wind excitation. In the present study, a series of wind tunnel tests were conducted to simulate the wind-induced vibration (WIV) of a type of cable-supported PV modules.

Why do PV modules have a wind tunnel?

The wind tunnel test results indicate that large vibrations occurred when the PV modules encounter strong winds, which seriously threaten the safety of the structure. 4. Suppression of the WIV of PV modules supported by cables

Does a cable-supported PV system have aeroelastic instability?

Tamura et al. (2015) experimentally investigated the aeroelastic instability of a cable-supported PV system using a scaled model and concluded that the vibration was closely related to the sag, wind speed and wind direction.

Why do photovoltaic panels vibrate in a wind tunnel?

Photovoltaic panels supported by suspension cables is tested in a wind tunnel. Strong vibrations occur when the wind speed is above a critical value. The vibrations of the windward panels are much stronger than the leeward panels. The Photovoltaic panels mainly vibrate at the first vertical and torsional mode.

Does a building affect the wind load of a ground-mounted PV module?

They observed that the presence of a building change the aerodynamic loads of the PV modules, and the effects of row spacing, tilt angle, and shielding from windward modules on the wind loads of ground-mounted PV modules are similar to those of roof-mounted modules.

Do building parameters affect wind load of PV modules mounted on roofs?

Banks (2013), Browne et al. (2013), Cao et al. (2013), Kopp and Banks (2013), Pratt and Kopp (2013), Aly and Bitsuamlak (2014), Stathopoulos et al. (2014), Stenabaugh et al. (2015), and Wang et al. (2018) further considered the effects of building parameters on the wind loads of PV modules mounted on roofs.

In terms of structure, flexible support can be roughly divided into single-layer suspension cable system, prestressed double-layer cable system (load-bearing cable + stability cable), ...

The flexible photovoltaic module support system, which can be used in complex and long-span environments, has been widely studied and applied in recent years. In this study, the wind ...

Semantic Scholar extracted view of "Experimental study on critical wind velocity of a 33-meter-span flexible photovoltaic support structure and its mitigation" by Jiaqi Liu et al. ...

Photovoltaic flexible support truss

generate power with photovoltaic arrays. Rigid-body and flexible-body dynamic char­ ... The support truss that forms the space-station keel, the keel extension, the transverse ...

The invention discloses an arch-supported flexible photovoltaic support structure, and a flexible photovoltaic support system comprises: the foundation structure is used as a supporting...

Custom Flexible Solar Panel Mounting System ... In terms of structure, flexible support can be roughly divided into single-layer suspension cable system, prestressed double-layer cable ...

The invention discloses a floating type semi-submersible platform of an offshore photovoltaic power station. The solar energy power generation system comprises a photovoltaic module ...

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation ...
