

What are the guidelines for solar PV system sizing?

ms.4. Guidelines for Grid Connected System Sizing Solar PV system sizing will be limited by two factors, the amount of physical space available for the installation and the electricity consumption profile of the building (load profile). Current regulations do not provide favourable incentives for systems to fe

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement,builders should minimally specify an area of 50 square feetin order to operate the smallest grid-tied solar PV inverters on the market.

What's new in the DTI solar PV guide?

Since the first edition (2002) the guide has been updated to reflect the significant experience gained with-in the UK PV industry under the DTI solar PV grants programmes. Other major changes covered include:

Where should a PV inverter be installed?

An inverter supplied from a PV array must preferably be installed in a dedicated circuitin which: no current-using equipment is connected,and no provision is made for the connection of current-using equipment,and no socket-outlets are permitted. An inverter must not be connected by means of a plug with contacts which may be live when exposed.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.
