What is a solar power inverter?

A solar power inverter is a device that converts the DC output collected from your solar panels into alternating current (AC). It acts as the gateway between the photovoltaic system and the devices and appliances drawing energy from your solar panel system. Solar power inverters are available at Renogy for sale, along with batteries and other inverters.

How does a solar panel inverter work?

A solar panel inverter converts the DC electricity generated by your solar panels into AC electricity that your home appliances can use. For instance, if you install a solar panel system with a standard solar panel inverter and later decide to add a battery system.

Is a power inverter required for a solar panel?

You'll typically need a power inverter for any solar panel larger than five watts. Despite the fact that solar inverters can power appliances on mobile vehicles like an RV, truck, motorhome, or boat, there are also power inverters for homes during an outage to keep household appliances operating.
