

Do you need an electrician to test a PV inverter?

Warning: Carrying out these tests involves working with live DC and AC voltages. The testing must only be carried out by an ACT licensed electrician. For inverters with PV panels connected, the tests must be conducted at a time of day when weather conditions allow the PV system to be producing a minimum power output.

Why do solar PV system installers need to identify defective inverters?

This approach helps solar pv system installers to prevent time consuming problems when defective solar inverters are identified after arrival and cost-intensive installation.

What is a photovoltaic (PV) panel?

The solar panel or PhotoVoltaic (PV) panel, as it is more commonly called, is a DC source with a non-linear V vs I characteristics. A variety of power topologies are used to condition power from the PV source so that it can be used in a variety of applications such as to feed power into the grid (PV inverter) and charge batteries.

How does a PV inverter work?

In this manner, the PV inverter operates similar to a fixed reactor bank, which, when switched on, provides a fixed amount of reactive power based on the reactive power capability designed for the bank. However, the PV inverter will continue to also inject a set amount of active power based on the current load of the system.

What is PV inverter topology?

Figure 2.1: PV inverter topology. Photovoltaic (PV) arrays comprise of a string of modules connected in parallel, where each string consists of modules connected in series. By adjusting the number of parallel strings or series-connected modules, the characteristic curve of the PV array is adjusted and the maximum power point (MPP) is adjusted.

How can a PV inverter be used in a utility system?

Integrate PV inverters into utility supervisory control and data acquisition systems or AMI systems. Inverters could be tied into utility communications systems, which would issue a warning to inverters in sections of the utility isolated from the mains. Any available channel, such as BPL, DSL, or coax, could be used.
