What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

How much load can a PV system impose on a stairhood?

Extensible PV system If extensible PV system is installed, its fully extended area should not exceed half of the roof area. PV system installed on roof of stairhood should not exceed 1.5m high measured from the level of the roof of the stairhood. The average imposed load should not exceed 75kg/m<sup>2</sup>.

How do asset owners manage a fleet of PV systems?

The asset owner or asset manager should allocate sufficient internal resources and secure any required external resources to implement the O&M plan. Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s).

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.
