

Photovoltaic panel back plate nameplate

What are the nameplate ratings on photovoltaic panels & modules?

The nameplate ratings on photovoltaic (PV) panels and modules summarize safety, performance, and durability specifications. Safety standards include UL1730, UL/IEC61730, and UL7103, a recent standard for building integrated photovoltaics (BIPV). Safety standards ensure that PV modules demonstrate non-hazardous failure modes.

What does a permanent label on a PV module mean?

permanent label at the PV disconnect means Rated maximum power point voltage. Rated maximum power point voltage. Maximum is the lower of the following 2 values: The total STC DC power rating for all PV Modules divided by the nominal string voltage value listed in

Do PV modules have a switch?

Any contact of 30V or larger DC Voltage can be fatal. In case of no connected load or external circuits, modules can still produce voltage. Please use insulation tools and wear rubber gloves when operating modules in the sunlight. The PV modules do not have a switch.

Which materials should be used to install photovoltaic modules?

JA Solar recommends that when installing modules at the seaside, stainless steel or aluminum materials should be used to contact the photovoltaic modules, and the installation parts should be well protected from corrosion. The tilt angle of the modules is measured between the surface of the modules and a horizontal ground surface.

What are the safety standards for photovoltaic modules?

Safety standards ensure that PV modules demonstrate non-hazardous failure modes. Performance standards include IEC 61215, which specifies requirements for the design qualification and type approval of terrestrial photovoltaic modules suitable for long-term operation in general open-air climates, as defined in IEC 60721-2-1.

How many rating conditions are required to report a photovoltaic module?

EN 50380 requires reporting the module data at only three rating conditions: STC, NOCT, and LIC. The newly published (January 2011) standard IEC 61853-1 titled "Photovoltaic Module Performance Testing and Energy Rating" (IEC, 2011) requires reporting the module data at two
