How do I design a solar panel system?

Begin by drawing a clear and accurate representation of your solar panels, labeling each panel with its wattage and the number of panels in the system. Then, draw the necessary lines and connections to show how the panels will be wired together, as well as the connections to other components like inverters and batteries.

How does a photovoltaic system work?

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.
