What is a photovoltaic cell?

Explore SuperCoaching Now The diagram above is a cross-section of a photovoltaic cell taken from a solar panel which is also a type of photovoltaic cell. The cell consists of each a P-type and an N-type material and a PN junction diode sandwiched in between. This layer is responsible for trapping solar energy which converts into electricity.

What are photovoltaic cells & how do they work?

Photovoltaic (PV) cells, or solar cells, are semiconductor devices that convert solar energy directly into DC electric energy. In the 1950s, PV cells were initially used for space applications to power satellites, but in the 1970s, they began also to be used for terrestrial applications.

How does a photovoltaic cell convert solar energy into electrical energy?

A photovoltaic cell harnesses solar energy; converts it to electrical energy by the principle of photovoltaic effect. It consists of a specially treated semiconductor layer for converting solar energy into electrical energy.

What are the characteristics and operating principles of crystalline silicon PV cells?

This section will introduce and detail the basic characteristics and operating principles of crystalline silicon PV cells as some considerations for designing systems using PV cells. A PV cell is essentially a large-area p-n semiconductor junction that captures the energy from photons to create electrical energy.

What is the basic structure of a PV cell?

The basic structure of a PV cell can be broken down and modeled as basic electrical components. Figure 4 shows the semiconductor p-n junction and the various components that make up a PV cell.

What is an equivalent circuit model of an ideal solar cell?

An equivalent circuit model of an ideal solar cell's p-n junction uses an ideal current source (whose photogenerated current increases with light intensity) in parallel with a diode (whose current represents recombination losses). To account for resistive losses, a shunt resistance and a series resistance are added as lumped elements.
