How AutoCAD is used in solar PV design?

AutoCAD is a computer-aided design (CAD) software that when used in solar PV design, allows solar designers and engineers to create precise 2D and 3D CAD solar panel drawings, plant layouts and blueprints to help in the process of solar installation.

Why should you use AutoCAD for solar projects?

As a software, it is extremely feature-loaded and is an in-demand skill by solar companies around the globe. AutoCAD helps solar designers create comprehensive project designs of ground-mounted, rooftop, carport and sloped roof solar projects. It also provides wire sizing, stringing, and single line diagram generation.

What is pvcad & AutoCAD?

PVCAD is built within Autodesk's AutoCAD application. Now that you have installed PVCAD and AutoCAD, you're almost ready to get started with solar project design. Let's take a moment to make sure you know your way around AutoCAD.

How does pvcad work?

PVCAD generates two dozen solar project-specific layers, including system components, setbacks, shadows, wind zones and much more. Create additional layers of your own as needed. Using the AutoCAD command input you can access numerous common and complex features of PVCAD and PVCAD Mega.

Should I use pvcad Mega or pvcad?

We recommend using PVCAD for all projects <5MW and PVCAD Mega for ground mounted projects >5MWs. PVCAD Mega has enhanced topographic features and allows you achieve scale on large projects much faster. We have written the guide in a concise, straightforward manner for simple onboarding, and tutorials.

What is pvcad Mega?

PVCAD Mega has enhanced topographic features and allows you achieve scale on large projects much faster. We have written the guide in a concise, straightforward manner for simple onboarding, and tutorials. Please note, that if you have PVCAD Mega, this application comes with access to PVCAD when change from "Utility" to "Standard" mode.
