How does a ladder module work?

An operator pulls the rope to raise the module. The module slides along the outward facing surface of the ladder rails. "Ramps" allow the module to slide over any discontinuities in the ladder surface (e.g. the step between sections in the ladder).

How does a PV module work?

The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder. A patented module "hook" attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. An operator pulls the rope to raise the module.
