

How do I use the Global Solar Atlas?

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites. The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Is the Global Solar Atlas suitable for project-specific analysis of large power plants?

For project-specific analysis of large power plants, the data available via the Global Solar Atlas is suitable only for preliminary analysis. The PV yield estimates do not account for many important factors that can impact potential yield of a photovoltaic power plant.

How accurate is the Global Solar Atlas?

While the data powering the Global Solar Atlas is the most recent and most accurate currently available, it is not fully validated in many developing countries due to the lack of ground-based measurement data from high precision solar radiation sensors.

Why is the World Bank launching a global solar atlas?

The World Bank, in partnership with the International Solar Alliance (ISA), launched the Global Solar Atlas at the World Future Energy Summit in Abu Dhabi. It serves as an example of the World Bank's commitment to ISA and to scaling up renewable energy in client countries.

How do we provide a global inventory of PV installations?

Here we provide a global inventory of commercial-, industrial- and utility-scale PV installations (that is, PV generating stations in excess of 10 kilowatts nameplate capacity) by using a longitudinal corpus of remote sensing imagery, machine learning and a large cloud computation infrastructure.

Free and open access to photovoltaic (PV) electricity generation potential for different technologies and configurations. Available in English, French, Italian, Spanish and German. Extensive supporting documentation - see the links at ...

What does "Solar PV" refer to? PV = Photovoltaic* (not concentrated solar) *Energy from sunlight creates an electrical charge in a solar cell. This electricity is then collected (sometimes stored ...

Each "panel measures 1 x 1.7 m (3.3 x 5.5 ft) and features an anti-reflective filter to prevent glare. This is mounted as a multi-array format in a frame where all components and ...

A new World Bank report - "Solar Photovoltaic Power Potential by Country" - attempts to fill this gap by evaluating the theoretical potential (the general solar resource), the practical potential (accounting for additional factors affecting PV ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally. It is provided by the World Bank Group as a free service to governments, developers and the general public, and allows users to quickly ...

Each "full black" panel measures 1 x 1.7 m (3.3 x 5.5 ft) and features an anti-reflective filter to prevent glare. This is mounted as a multi-array format in a frame where all ...

The Global Solar Atlas (GSA) is a free, online, map-based application that provides information on solar resource and photovoltaic power potential globally. It features the online interactive map tools, simplified photovoltaic (PV) power calculator, reporting tools and the extensive download section. It is intended to provide policy makers, academia, and renewable energy stakeholders to rais...

Solar panels need regular cleaning to ensure they are working at their optimum efficiency, and spraying them with the hose from the ground or relying on a heavy downpour won't necessarily get the ...

This review addresses the growing need for the efficient recycling of crystalline silicon photovoltaic modules (PVMs), in the context of global solar energy adoption and the impending surge in end-of-life (EoL) ...

The World Bank has published the study Global Photovoltaic Power Potential by Country, which provides an aggregated and harmonized view on solar resource and the potential for development of utility-scale photovoltaic (PV) power ...

Responding to client's needs, ESMAP and its partners have created a free, web-based tool--the Global Solar Atlas--that can help identify potential sites for solar power generation virtually anywhere in the world.
