

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

Can a photovoltaic system replace roof cladding?

It is possible for photovoltaic systems to replace roof cladding entirely. This is known as a solar or energy roof. Additionally, PV modules can be integrated into the roof cladding. Solar roof tiles are a special type of in-roof installation. They can be integrated into the existing roof cladding without any extra mounting systems.

How to install a PV system?

The first step is to carry out a survey of the geology of the land where the PV system will be installed. A bore test and tests to understand the soil conditions are essential to understanding the best type of foundation to use. You need to assess: These variables demonstrate how different sites can require different mounting structures.

How do I install a solar energy system?

Installation requires mounting the panels to your roof (or wherever you plan to install them), connecting them to one another and an inverter, and syncing your home's electrical system so energy goes toward your appliances and devices. Your panels may include specific instructions. Here are the typical steps to install a solar energy system. 1.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

How do you install solar panels on a roof?

Start with the racking system, which you'll fix to your roof to hold your panels in place. Measure the space you have on your roof, and then arrange a solar panel design on the ground that fits within the allotted space. You can use chalk lines to create a guide for yourself on your roof.
