Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

How do I design a highly efficient solar PV system?

This comprehensive guide will walk you through the key factors, calculations, and considerations in designing a highly efficient solar PV system. Designing an effective solar PV system requires careful consideration of energy requirements, site assessment, component selection, and proper sizing of inverters and charge controllers.

How do PV systems integrate with a utility?

Integration issues need to be addressed from the distributed PV system side and from the utility side. Advanced inverter, controller, and interconnection technology development must produce hardware that allows PV to operate safely with the utility and act as a grid resource that provides benefits to both the grid and the owner.

Are PV systems compatible with the utility grid?

Interest in PV systems is increasing and the installation of large PV systems or large groups of PV systems that are interactive with the utility grid is accelerating, so the compatibility of higher levels of distributed generation needs to be ensured and the grid infrastructure protected.

What is building-integrated PV (BIPV)?

As systems have improved, the cost-benefit analysis increasingly favors tracking for ground-mounted systems. While most solar modules are placed in dedicated mounting structures, they can also be integrated directly into building materials like roofing, windows, or facades. These systems are known as building-integrated PV (BIPV).

How do PV systems affect the utility grid?

The variability and nondispatchability of today's PV systems affect the stability of the utility grid and the economics of the PV and energy distribution systems. Integration issues need to be addressed from the distributed PV system side and from the utility side.
