How do I install a solar PV system?

Components that are certified and tested for solar PV installations must be installed in accordance with the NEC and the manufacturer's installation instructions. Most residential solar PV systems are very simple from an electrical standpoint, and they can be designed by a solar or electrical contractor.

What should be included in a solar PV installation checklist?

The checklist does not need to take the exact form of this template, but it should include the basic information an installer, developer, or property owner would need to know in order to receive approval for the installation of a residential solar PV system.

Do I need a building permit to install a PV system?

ordinances requiring certain new buildings to install PV systems.<sup>13</sup> Permitting and inspection Most local governments require a building permit prior to the installation of a PV system to ensure the system meets engineering and safety standards. After installation of a PV system is completed and

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

Do you need a roof access point for a solar PV system?

Solar installations must also allow for fire department smoke ventilation operations. The International Building, Residential, and Fire Codes outline the requirements for a roof access point and clear access points along the roof. The installation of solar PV systems may be subject to additional provisions adopted by the local enforcing agency.

Can photovoltaic panels be installed on a building roof?

The installation of photovoltaic panels on a building roof or integral with a building roof also raises other code issues (e.g., roof loading, wind loading, fire ratings, weather tightness, mounting systems, roof penetrations, etc.), which may also be relevant for systems mounted on or integral to a wall.

Alternatively, PV installations can be installed 3m above grade level, if a 1-hr fire-rated horizontal projection that extends at least 600mm from the building is installed beneath the PV installation. (c) PV installations shall be installed ...
