

What is a photovoltaic solar panel?

Photovoltaics, more commonly known as solar panels, are one of the purest and most reliable methods for producing renewable energy. Each panel is composed of photovoltaic cells, which activate when exposed to the sun, absorbing its rays and converting them into clean electricity.

Are solar roofs a good option for low-density homes?

Lower-density homes with solar roofs are not a new phenomenon; however, recent technological advances give builders and architects the option of adopting green initiatives without compromising a home's design. Solar Roof systems come in a range of UV-stable, fade-resistant colors and patterns in keeping with design needs.

Are building-integrated photovoltaics a viable alternative to solar energy harvesting?

Historically, solar energy harvesting has been expensive, relatively inefficient, and hampered by poor design. Existing building-integrated photovoltaics (BIPV) have proven to be less practical and economically unfeasible for large-scale adoption due to design limitations and poor aesthetics.

What are the different types of photovoltaic solar panels?

Below we analyze in more detail each of the most common photovoltaic solar panels types: Monocrystalline silicon (mono-Si) solar cells are pretty easy to recognize by their uniform coloration and appearance due to their high silicon purity. This PV solar panel type is the most highly efficient in the market today, working in the 15-20% range.

Do solar roofs need a specialized installation?

Solar Roof systems come in a range of UV-stable, fade-resistant colors and patterns in keeping with design needs. Helpfully, no specialized installation is required, and once installed, their elements require no maintenance because they are treated with an anti-soiling coating that reduces the accumulation of dust and dirt on surfaces.

How did Burkett design integrate photovoltaic modules?

As Barton Harris of Burkett Design explained: "to completely integrate the photovoltaic modules in the aesthetics of the facade, not only was the color of the glass carefully chosen to match the color of the surrounding modules but its surface was coated with a similar sheen."
