

Is photovoltaic pavement a viable energy harvesting technology?

Recommendations for its future development are proposed in six aspects. As an emerging energy harvesting pavement technology, the photovoltaic (PV) pavement, which combines mature photovoltaic power generation technology with traditional pavement facilities, can make full use of the vast spatial resource of roadways.

Are solar-powered transportation schemes a viable alternative to conventional buses?

Overall, results indicate that, albeit the high capital costs, solar-powered transportation schemes present a viable alternative for replacing conventional buses at the studied location, especially considering conventional PV panels.

What is photovoltaic pavement?

To deal with this issue, the concept of photovoltaic (PV) pavement is emerging. It regards the modified photovoltaic modules as one part of the road structure, equipped with the inherent function of electricity generation and vehicular traffic support. The core advantage of this technology is the non-extra land occupation.

What is the area available for integrating solar PV on a vehicle?

Area available for VIPV integration The area available for integrating solar PV on a vehicle has confined space offered by unoccupied vehicle surfaces such as the roof, bonnet (hood), and trunk. Earlier research has put forward different ideologies for majorly integrating PV on the vehicle's roof.

Can photovoltaic systems be used in road vehicles?

Photovoltaic systems can be integrated into various types of vehicles such as cars, bicycles, planes and boats [21,22] but in this paper the scope of this technology will be limited to road vehicles only.

What are the different types of PV-powered applications for electric mobility?

Two types of PV-powered applications for electric mobility are being considered at the moment: Vehicle-integrated PV (VIPV): In these applications, PV cells or PV modules are integrated into the vehicle body and produce electricity which can be used for powering the vehicle's electric engine or stored in the battery pack as shown in Figure 3.

Designing with photovoltaics (PV) is the core focus of this paper which presents the results of a design study on conceptual PV applications for electric mobility systems. This is a relevant direction for new product ...

Where η_1 is the power generation efficiency of the PV panel at a temperature of $T_{cell 1}$, t_1 is the combined transmittance of the PV glass and surface soiling, and $t_{clean 1}$ is ...

Thus, across the globe, major cities are moving in the smart city direction, by, for example, incorporating photovoltaics (PV), electric buses and sensors to improve public transportation. We study the concept of integrated ...

2020, International Research Journal of Modernization in Engineering Technology and Science. Global warming and increasing fuel prices in India, taking these two problems in consideration, ...

Global efforts are underway to diversify environmentally sustainable strategies for photovoltaic (PV) installations to enhance the accessibility of green electricity. Here, we ...

This research aims to offer scientific insights for designing and deploying PVNBs, thereby fostering the progressive adoption and application of distributed photovoltaics in transportation infrastructures.

The purpose of this study is to investigate viewpoints on solar energy technologies for sustainable development, with a particular emphasis on photovoltaic (PV), as well as the literature on solar ...

Like other plants, every photovoltaic (PV) power plant will one day reach the end of its service life. Calculations show that 96,000 tons of PV module waste will be generated ...

The life cycles of glass-glass (GG) and standard (STD) solar photovoltaic (PV) panels, consisting of stages from the production of feedstock to solar PV panel utilization, are ...

Many acres of PV panels can provide utility-scale power--from tens of megawatts to more than a gigawatt of electricity. These large systems, using fixed or sun-tracking panels, feed power ...

Photovoltaic panel transportation modernization research
