

# Photovoltaic panels installed on farmers roofs for leasing

Should farmers build solar panels on agricultural land?

But thanks to years of research, farmers and developers have learned to coordinate their efforts to benefit both parties. It may involve building solar panel arrays about 8 feet off the ground to allow space for crop growth and farm equipment. As of the end of 2022, less than 2% of solar energy projects are on agricultural land.

Can I lease a solar farm?

Westmill Solar Park is one of the world's largest community-owned solar power stations. Typically, utility solar power stations are huge in comparison to community solar farms. This means that your property -- whether big or small -- could be a candidate for leasing a solar farm. How much land do you need for a solar farm?

Are solar panels a good fit for your farm?

Solar panels can increase your operation's profitability. One government grant program for solar panels on farms is called the Rural Energy for America Program (REAP). Why solar energy may be a good fit for your farmers and ranchers Tips and funding opportunities for solar projects on your farm

Should agrivoltaic planners put solar over a farm?

Or farm first, and put solar over it?" If farming is the main priority, she says, then the solar panels may need to be spaced farther apart and possibly be raised higher. Such changes could potentially limit how much electricity those farm fields generate. And agrivoltaic planners may need to treat the soil, Macknick says.

Can solar leasing help farmers balance their budgets?

Solar leasing has the potential to significantly help farmers balance their budgets with minimal impact to farm operations and should be carefully considered. For more detailed information on solar leasing, consult the following publications: Guide to Land Leases for Solar, Solar Energy Industries Association.

How do solar panels benefit farmers and developers?

It may involve creating space beneath or between rows of solar panels for crop production, pollinator habitats, or livestock grazing. Setting up solar panel arrays in the past meant sacrificing acres of good farmland. But thanks to years of research, farmers and developers have learned to coordinate their efforts to benefit both parties.
